Work History(Certificate Link)

iFedora solution Private Limited, Pune
Process Associate – Accounts Receivable (US Healthcare)
(July 2024 - July 2025)

- Managed end-to-end Accounts Receivable (AR) processes for US healthcare clients, including claim submissions, payment posting, and denial management.
- Analyzed claim rejections and denials, applying strong analytical and problem-solving skills to identify root causes and ensure timely resolution.
- Performed insurance follow-ups to expedite claim processing and improve cash flow cycles.
- Ensured compliance with US healthcare regulations and payer guidelines while maintaining data accuracy.

Wynisco, Pune
US IT Recruiter
(Jan 2024 - June 2024)

- Managed full-cycle recruitment for the US IT market, including sourcing, screening, and coordinating interviews for technical roles.
- Evaluated candidates based on technical skills, experience, and project requirements, ensuring alignment with client needs.
- Utilized job portals and professional networks to build a strong candidate pipeline.
- Coordinated with hiring managers and clients to understand job requirements and provide suitable candidates within timelines.

Synechron Technologies Pvt Ltd, Pune
Graduate Trainee (Frontend Developer)
(Nov 2022 - Nov 2023)

- Contributed to an enterprise banking application, applying strong problem-solving and debugging skills to resolve performance and functional issues.
- Utilized Data Structures and Algorithms concepts to optimize data handling and improve application efficiency.
- Worked with asynchronous programming patterns, aligning with multithreading and non-blocking execution concepts.
- Collaborated with cross-functional teams to analyze system behavior and improve reliability.

Academic Projects Undertaken

- Movie Ticket Booking System - Developed a user-friendly ticket booking platform using HTML, CSS, JavaScript, with SQL and PHP for backend functionality, enabling seamless seat selection, payment processing, and booking management.
- Plant-Disease-Detection-App - Built a Java-based mobile application integrating TensorFlow and Python, allowing users to upload plant images for AI-powered disease detection, improving agricultural productivity and early disease prevention.
- Image Forgery Detection Tool - Designed a Python-Tkinter GUI application leveraging image processing libraries, capable of detecting tampered images by analyzing metadata and pixel inconsistencies for enhanced digital forensics.
